

National Center for Health Statistics: National Vital Statistics System Modernization – New Opportunities for Interoperable Data NVSS

Frequently Asked Questions

As of 6/29/23 1:30PM

Document	Section	Question	Response
RFS	--	<p>It was mentioned that this project will inform best practices for a National Secure Data Service (NSDS) in general. Because of that wanted to confirm - does the proposal need to address specifically health data, or can it describe the best practices that apply to any type of data, since it will be informing the general NSDS service? Does the organization submitting the proposal need to have the domain expertise in health data?</p>	<p>Describing best practices for any type of data could be part of the proposal, however, as noted in the RFS, the objective of this project is to highlight new opportunities for the use of interoperable health data to support timely research and public health surveillance and then extend how the lessons learned could be applicable to a potential future NSDS. The organization does not need to have the domain expertise in health data but should possess the qualifications to perform the work as described in the RFS.</p>
--	--	<p>Does ADC anticipate the final report being published on a federal website/is 508 compliance required?</p>	<p>The final report may be posted on both federal and non-federal websites so 508 compliance is required.</p>
