

Secure Multiparty Computation: A Case Study

(SMPC-25) FAQ

	Question	Answer
1	<p>Various times in the RFS you note: "This project seeks options for developing an open-source end-to-end secure multiparty computation tool for calculating statistics within the NSDS Secure Compute Environment."</p> <p>Previous projects under the ADC have used non-open source tools as part of their solution. Would you be open to solutions that have components that are commercial, non-open source tools?</p>	<p>While open-source solutions are preferred, proposals may include non-open-source solutions with clearly specified benefits on why one solution was selected over another to meet the objectives stated in the RFS.</p>
